Index to Volume 120

Adaptation, sensory, exact, a mechanism for, based on receptor modification, 151
AKINTONWA, D. A. A., Mechanistic biotransformations of some amphetamine drugs, 303
ALONSO, G. L. and HECHT, J. P., Equilibrium and steady state thermodynamics of active transport systems studied on simple models simulating Ca^{2+} transport through sarcoplasmic reticulum membranes, 191
ALONSO-DEFLORIDA, F., MINZONI, A. A. and MORALES, M. A., A synaptic model for the kindling effect, 285
Amphetamine drugs, mechanistic biotransformations of, 303
ANDERSSON, M., Sexual selection and the importance of viability differences: a reply (letter), 251
Animals, cost analysis of arterial branching in the cardiovascular systems of man and, 111
Antedating, the brain, time reversal and Libet's concept of, 443
Apis mellifera, heat production in the winter cluster; a theoretical study, 447
Arterial branching in the cardiovascular systems of man and animals, cost analysis of, 111
Asymmetric contests involving two resources, 237
ATLAN, H., BEN-EZRA, E., FOGELMAN-SOULIE, F., PELLEGRIN, D. and WEISBUCH, G., Emergence of classification procedures in automata networks as a model for functional self-organization, 371
Automata networks as a model for functional self-organization, emergence of classification procedures in, 371

Bacillus megaterium and *Bacillus subtilis*, sequence homologies of glucose-dehydrogenases of, 489
Bacillus subtilis and *Bacillus megaterium*, sequence homologies of glucose-dehydrogenases of, 489
BARKER, R., Substance P and Parkinson's disease: a causal relationship, 353
BARTON, N. H. and POST, R. J., Sibling competition and the advantage of mixed families, 381
BECK, J. S. (see HARDY, C. D.), 181
BEN-EZRA, E. (see ATLAN, H.), 371
Biotransformations, mechanistic, of some amphetamine drugs, 303
Blood velocity measurements, analysis by autoregressive modelling, 419
Brain, time reversal and Libet's concept of antedating, 443
Branching, arterial, in the cardiovascular systems of man and animals, cost analysis of, 111

Calcium dependence of the binomial parameters, and explanation of; on the quantal hypothesis of neurotransmitter release, 205
Ca^{2+} transport through sarcoplasmic reticulum membranes, equilibrium and steady state thermodynamics of active transport systems studied on simple models simulating, 191
Carbon dioxide, a limit cycle type oscillation model for the cell cycle regulated by, 309
Cardiovascular systems of man and animals, cost analysis of arterial branching in, 111
Cell cycle controls in higher eukaryotic cells: resting state or a prolonged G_1 period?, 467
Cell cycle regulated by carbon dioxide, a limit cycle type oscillation model for, 309
Cell suspensions, coagulation in; extensions of the von Smoluchowski model, 181
Cell turnover, the application of kinematic equations for the study of, 141
Cells: interactions between macrophage and T-lymphocytes: tumor sneaking through intrinsic to helper T cell dynamics, 331

Classification procedures in automata networks as a model for functional self-organization, 371
Coagulation in cell suspensions: extensions of the von Smoluchowski model, 181
Coding and non-coding, protein, regions in DNA sequences, a new statistical approach to discriminate between, 223
Codons, unfavourable, effect of their distribution on the maximum rate of gene expression by an heterologous organism, 99
Coherence of excitonic motion in the photosynthetic unit, 411
Competition, sibling, and the advantage of mixed families, 381
Complementarity to the 3′-terminus of 18s rRNA, eukaryotic mRNA 5′-leader sequences have dual regions of, 85
Conduction, excitation, in the heart, simulation analysis: propagation of excitation in different tissues, 389
Contests, asymmetric, involving two resources, 237
Cost analysis of arterial branching in the cardiovascular systems of man and animals, 111
Cycle, cell, controls in higher eukaryotic cells: resting state or a prolonged G_1 period?, 467
Cycle, cell, regulated by carbon dioxide, a limit cycle type oscillation model for, 309

DANIEL, R M., The immune response to proteins from extreme thermophiles (letter), 125
DE BOER, R J. and HOGEWEG, P., Interactions between macrophage and T-lymphocytes: tumour sneaking through intrinsic to helper T cell dynamics, 331
DEGNER, M. (see MAROUN, L. E.), 85
DEVREOTES, P. N. (see SEGEL, L. A.), 151
Diffusion, external, in solid-phase immunoassays, 129
DNA girase activity, energy storage during, 63
DNA sequences, a new statistical approach to discriminate between protein coding and non-coding regions in, 223
Dopamine D_1 receptor, note on an abnormality of the operator for the structural gene of, as a possible cause of schizophrenia, 277
Dynamics, heart chamber, dependence on chamber demands and myocardial properties, 1

Elastic similarity, notes concerning (letter), 499
ELWOOD, R. W. and NEIL, S. J., Asymmetric contests involving two resources, 237
Energy storage during DNA girase activity, 63
Environment, variable, learning to forage in, 321
Eukaryotic cells, higher, cell cycle controls in; resting state or a prolonged G_1 period?, 467
Eukaryotic mRNA 5′-leader sequences have dual regions of complementarity to the 3′-terminus of 18s rRNA, 85
Eukaryotic sequences around transcription initiation sites, compilation of, 479
Evolution of meiosis, "semi-meiosis" as the first step in (letter), 503
Evolution, mycoplasma, a hypothesis for the mechanism of, 457
Excitation conduction in the heart, simulation analysis: propagation of excitation in different tissues, 389
Excitonic motion in the photosynthetic unit, how long does it remain coherent?, 411

Families, mixed, advantage of, and sibling competition, 381
5′-leader sequences, eukaryotic mRNA, have dual regions of complementarity to the 3′ terminus of 18s rRNA, 85
Flapping wing propulsion, optimum pitching axes in, 255
FOGELMAN-SOULIE, F. (see ATLAN, H.), 371
Forage learning in a variable environment, 321
FORTNAGEL, P., LAMPEL, K. A., NEITZKE, K.-D. and FREESE, E., Sequence homologies of glucose-dehydrogenases of *Bacillus megaterium* and *Bacillus subtilis*, 489
Four-stranded unique model of a homologous recombination intermediate, 215

FRANCISKOVICH, P. P. (see MAROUN, L. E.), 85
FREESE, E. (see FORTNAGEL, P.), 489
Functional self-organization, emergence of classification procedures in automata networks as a model for, 371

Gene expression by an heterologous organism, effect of distribution of unfavourable codons on the maximum rate of, 99
Gene, structural, of the dopamine D_1 receptor, note on an abnormality of the operator for, as a possible partial cause of schizophrenia, 277
GIDDENS, D. P. (see KITNEY, R. I.), 419
Glucose-dehydrogenases of *Bacillus megaterium* and *Bacillus subtilis*, sequence homologies of, 489
GOLDBETER, A. (see SEGEL, L. A.), 151

HARDY, C. D. and BECK, J. S., Coagulation in cell suspensions: extensions of the von Smoluchowski model, 181
Heart chamber dimensions and dynamics, dependence on chamber demands and myocardial properties, 1
Heart, simulation analysis of excitation conduction in; propagation of excitation in different tissues, 389
Heat production in the winter cluster of *Apis mellifera*; a theoretical study, 447
HECHT, J. P. (see ALONSO, G. L.), 191
HOGEWEG, P. (see DE BOER, R. J.), 331
HOKKANEN, J. E. I., Notes concerning elastic similarity (letter), 499
Homologies, sequence, of glucose-dehydrogenases of *Bacillus megaterium* and *Bacillus subtilis*, 489
Homologous recombination intermediate, a unique four-stranded model of, 215
HOPKINS, R. C., A unique four-stranded model of a homologous recombination intermediate, 215

Image/pressure data, evaluation of myocardial properties from, for chronic conditions, 31
Immune response to proteins from extreme thermophiles (letter), 125
Immunoassays, solid-phase, external diffusion in, 129
IRISAWA, H. (see KAWATO, M.), 389

KAWATO, M., YAMANAKA, A., URUSHIBARA, S., NAGATA, O., IRISAWA, H. and SUZUKI, R., Simulation analysis of excitation conduction in the heart: propagation of excitation in different tissues, 389
Kindling effect, a synaptic model for, 285
Kinematic equations, application for the study of cell turnover, 141
